

PRODUCT SPECIFICATION - APPLICATION & USE

Appendix 3

PRODUCT NAME: **POLISHEEN**

GENERAL DESCRIPTION: White emulsion. High quality metalised polish.

USE FOR WHICH PRODUCT IS INTENDED: POLISHEEN is a high quality emulsion polish designed for easy maintenance of linoleum, rubber, PVC, thermoplastic tiles and wood. Its metalised film is tough, hard wearing and resistant to removal by normal soaps and detergents. It locks out water, is resistant to scuffing, scratching and black heel marks and does not yellow or powder with age.

SPECIAL EQUIPMENT REQUIRED: None.

METHOD AND CONDITIONS OF USE: Remove old finishes with Chemaide POLISHEEN STRIPPER, rinse surface with water and allow to dry. Apply POLISHEEN with a damp mop or lambs wool applicator, making strokes in one direction. Allow to dry and then apply a second coat of POLISHEEN to produce a pleasing even depth of gloss. Maintain by damp mopping with POWERCLENS solution and from time to time, apply full coat of POLISHEEN according to the density of foot traffic. POLISHEEN should be used neat.

METHOD OF CONTROL: Shine can be controlled by increasing number of applications and responds well to spray buffing as a means of maintaining the freshly polished appearance.
