

## **Bulk De-Icer**

### THE SAFER ETHYLENE GLYCOL BASED DE-ICER

As part of our de-icing range of products, Chemaide Bulk De-icer delivers a safer solution to that winter problem of frozen vehicle windscreens. Containing NO methanol, unlike most traditional de-icers, Chemaide Bulk De-icer is substantially safer by reducing the risk of fire.

Bulk De-icer may be diluted with water and put into vehicle washer bottles and used as a winter windscreen wash as it contains a low foaming surfactant, and because it contains no methanol, it will not quickly refreeze after application.

- Safer than methanol based products.
- May be diluted with water and added to vehicle washer bottles for extra economy.
- Slow refreeze after application, unlike methanol based products.
