

CA200

HIGH QUALITY CONCRETE SEALER

CA 200 is part of our specialist industrial product range. Concrete floors are prone to dust and penetration by oil and other pollutants if they are not sealed. CA 200, is a high molecular weight polymer water dispersion, specifically designed for sealing porous cement surfaces, particularly concrete floors

As a result of CA 200 being water based it is non-flammable and it can be diluted for initial coats giving greater economy with fast drying times, normally around 20 minutes between applications.

CA 200 penetrates more deeply into concrete surfaces allowing several coats to be applied giving the surface a high quality, hard wearing seal with long lasting protection.

- High molecular weight polymer, resulting in good durability.
- Safe, Non-Flammable.
- Economic and simple to use.

Associated Chemaide Products: Battery Coating; Bitusolve; Bondit; CGR 77; Chemsolution; Easi-Fix; Kwik-Fix; SGC 22; Spectroal; Springclean; Stripoff

application Specialist/Industrial
