

## Chemsorb

### Absorbent Powder For Body Fluid Spillages

Chemsorb is a member of our Absorbents product family. In school and residential home environments, accidents involving the spillage of human body fluids are common place. The efficient cleaning of such spills can be a health hazard and the use of mops and cloths is unsuitable.

The product is a highly absorbent powder, pleasantly perfumed, designed for dealing with body fluid spillages. It will remove offensive odours and absorb approximately 6 times its own weight of liquid and remain brushable, rendering body fluids easy to handle and more conveniently disposable.

Chemsorb can be safely used on carpets and fabrics as it is bleach-free. This product is non-toxic which ensures it can be used safely near humans and animals. The powder is easy to apply and requires no agitation. It is subsequently easy to remove, by merely scraping or brushing into a plastic bag for disposal.

- Easy removal of body fluid spillages. Safer quick disposal
- Highly absorbent and economical to use
- Effective perfume which ensures a more acceptable clean up process
- Can be used in conjunction with Chemtab. Disinfection with absorption (see method of use).
