

Clearphos

Concentrated Cleaner & Disinfectant Descaler

Clearphos is a member of our Hygiene Descaler product family. Scale deposits are unsightly and harbour harmful bacteria. Clearphos eliminates unhygienic scale and kills bacteria leaving no odour behind which is especially important where an odour free environment must be maintained, such as food production areas. Used in toilets, baths, showers, urinals, sinks, wash hand basins and washroom floors; it is a concentrated acidic cleaner which does not cause corrosion.

The product is as effective as hydrochloric acid based alternatives, however it does not attack stainless steel or chrome finishes. It removes both scale and uric acid deposits in pipes, but may be economically diluted in situations where scaling is lighter.

Clearphos is completely odourless, is simple and easy to use, and can be applied by either mop or spray. It contains an effective bactericide but must not be mixed with bleaches or other chemical products.

- Clearphos is an inhibited phosphoric based acid descaler suitable for use on stainless steel and chrome without causing corrosion
- It descales and removes uric acid in pipe work reducing maintenance costs
- It kills bacteria and removes organisms which contribute to foul odours
- Odourless, which makes this a perfect product where an odour free environment must be maintained.
