

## Clensit

### Multi-purpose Biocidal Descaler

Clensit is part of our Hygiene Descaler product range. In washrooms and public conveniences where thorough cleanliness is essential, facilities need to be kept hygienic, scale free and fresh smelling. This can require the costly use of a range of products and prove time consuming. Clensit is an effective multi-purpose descaler which cleans, disinfects and deodorises in one easy operation.

This versatile cleaner has a fast acting bacterial action which removes metallic tarnishing and stubborn water stains from all washroom fixtures, returning sparkle to ceramic walls and floors. It hygienically dissolves lime scale and breaks down uric acid deposits found in washroom furniture and drainage pipework.

Easy to apply and economical to use, Clensit is suitable for toilets, baths, showers, urinals, sinks, wash hand basins, pools and fountains. For the first application, simply spray on undiluted and for stubborn soiling, use a brush then rinse and wipe off. This will completely cleanse all fixtures and leave the whole area free from foul odours. To ensure cost efficiency, future applications may be diluted with up to 5 parts water without compromising hygiene standards.

- Three functions in a single product - descales, deodorises and disinfects
- Maintains pipework and uric acid traps reducing the risk of costly blockages
- Economical to use – can be diluted in water
- Long lasting freshness with a pleasant perfume
