

Crystal Clear

Crystals for the Prevention & Removal of Ice

Crystal Clear is part of our De-Icer product range. The hazards caused by snow and ice have traditionally been resolved by salt, however many fail to realise the destruction upon surfaces and surrounding vegetation it can leave in its wake. Crystal Clear is the non-corrosive solution to preventing such damage during the winter months.

Fully free flowing and packed in durable containers, Crystal Clear removes snow and ice without damaging the path surface. Preferably used as a prevention rather than a cure, this biodegradable product eliminates the inconvenience caused by wintry conditions. This product continues working considerably longer than other alternatives, and to achieve maximum protection, should be applied before snow has fallen or surface water has begun to freeze.

Non-flammable and low in toxicity, these crystals are safe and simple to use on roads, paths, yards and grassy areas. Providing good coverage and suitable for many surfaces, Crystal Clear is economical and good value for money.

- Non-corrosive product which safely prevents and removes ice from all surfaces
- Free flowing crystals allowing rapid and efficient application
- Packed in 20 kilo pails, eliminating split bags or sacks during storage
- Crystal Clear is long lasting, and economical to apply
